21 July 1986

Mr. John P. Fowler II, PE
Dewberry and Davis
8401 Arlington Blvd.
Fairfax, VA 22031

Dear Mr. Fowler:

As part of the New Headquarters Building Project, this Agency transferred funds to the Falls Church Water Authority (FCWA) for the installation of a new 10-inch water line to serve the CIA compound. This new line is in addition to the existing 10-inch line which enters our compound from Route 123 and parallels the existing entrance roadway. In order to conform with FCWA design requirements, this Agency made a commitment to install a back-flow preventer valve in the old water lines.

Since your ongoing design effort indicates that the water meter pit at Route 123 will have to be relocated due to the Route 123 realignment project, it is requested that your design include the addition of a new back-flow preventer valve in that area. Requirements for this valve may be coordinated with Mr. Renn Nichols, FCWA, on 241-5109.

Should you have any technical questions regarding this request, please contact [redacted] of my staff on [redacted]

[redacted]

cc: Roy Conley - VDH&T
